

RESEARCH PROJECTS 2013

Project Title

Reverse Migration and Technology Transfer in Emerging Markets: Turkey and India

Principle Investigator(s)

David Stephen Zweig

Chair Professor, Division of Social Science

Abstract

The project addresses the issue of whether reverse migrants, particularly scientists and entrepreneurs, are an important source of technology transfer for emerging economies. I am completing a book on this and other aspects of reverse migration to China, but want to test my findings in India and Turkey. I will do some quantitative interviews in these two countries by the grant. I will also hire local academics to collect more questionnaires (target sample size: 200) on behalf of us.
